## Develop The Web Application Using Node-RED

## **TEAM ID: PNT2022TMID44152**

Aim: Develop the web application using Node-RED Steps Followed:

Opened a Node-RED project

• Added code to get child location in python

```
import json
import wiotp.sdk.device
import time
myConfig = {
    "identity": {
        "orgId": "hj5fmy",
"typeId": "NodeMCU",
"deviceId": "12345"
    "auth": {
        "token": "12345678"
client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()
While True:
        name= "Smartbridge"
        #in area location
        latitude= 17.4225176
        longitude= 78.5458842
        #out area location
        #latitude= 17.4219272
        #longitude= 78.5488783
        myData={'name': name, 'lat':latitude, 'lon':longitude}
        client.publishEvent(eventId="status", msgFormat="json", data=myData, qos=0, onPublish=None)
        print("Data published to IBM IoT platfrom: ",myData)
        time.sleep(5)
client.disconnect()
```

## • Created the GeoFence

• Editing the HTTP Request URL

• Located the child

Created the geofence node

Python script sending requests to IBM Cloud

```
Editor - C:\Users\HP\Desktop\child.py
                                                                                                ₽ × IPython console
                                                                                                 Console 2/A 🖸
child.py
                                                                                                     Data published to IBM IoT platfrom:
1 import json
                                                                                                     Data published to IBM IoT platfrom:
   2 import wiotp.sdk.device
                                                                                                     Data published to IBM IoT platfrom:
   3 import time
                                                                                                     Data published to IBM IoT platfrom:
